

Garden Tractors

G2160/G2460G/G2160-R48S

FEATURES

HST

The HST Shaft Drive Transmission System transmits power directly from the engine to the HST via a shaft, and from the HST to the tires by means of a gear train. This enables the G-Series to maximize durability and minimize power loss while running both smoother and quieter.

LADDER FRAME CHASSIS

Body rigidity is enhanced due to Kubota's unique, durable Ladder Frame Chassis.

The exceptionally rugged chassis, made from stamped steel, provides torsional stability even under the most extreme conditions.

SUSPENSION SEAT

The deluxe high-back seat adjusts easily to accommodate most any operator for an increased comfort level. With just one touch, you can disengage the lever-lock to reposition the seat.

FUEL EFFICIENT/LARGE-CAPACITY TANK

The G-Series is fitted with a large-capacity 5.8 gallon fuel tank. Coupled with Kubota's low-fuel consumption engines, you can complete a full day's work without stopping to refuel.

KUBOTA ENGINES

Highly Durable Liquid-cooled Diesel Engine

This quiet compact liquid cooled diesel engine produces 21 horsepower for reliable performance, even on the toughest jobs. This high torque, long life and low maintenance diesel engine provides heavy-duty power for mowing.

KUBOTA ENGINES

Superior Gasoline Engine based on the sturdy design of our diesel engine

The quiet, fuel efficient liquid cooled gasoline engine produces 24 horsepower to help you power through any job. And high power and torque allow you to work with confidence.

Garden Tractors

G2160/G2460G/G2160-R48S

FEATURES

DIRECT SHOOT MOWER DECK

The G2160-R48S "Direct Shoot" is a riding mower that features a three-blade, rear-discharge cutting deck that works to both cut and collect your grass. The Direct Shoot system allows it to cut and channel grass into the integrated rear grass catcher. And because the mower discharges through the center you can cut on either side of the mower deck.

DIRECT SHOOT COLLECTION SYSTEM

Thanks to the hydraulic dump system, the 14 bushel Grass Catcher is easily dumped from the drivers seat. It can be removed to rear discharge easily without any tools. It works great in wet conditions and when collecting leaves.

QUICK-ATTACHING MOWER/GRASS CATCHER

Both the mower and the grass catcher can be attached/detached in just minutes. The job can be accomplished alone, with just a few tools.

ELECTRONIC POWER STEERING

Micro-Computer Controlled Electronic Power Steering is a speed sensitive steering system that allows you precise control of your tractor. An electric motor automatically engages as you turn the wheel, for easier and more efficient steering.

SHAFT DRIVE

The Shaft Drive Transmission System provides smooth power to the mowing unit. Engine power can be directly transmitted from the engine to the HST via a shaft, and from the HST to the tires by means of a gear train. This enables the G-Series to maximize durability and minimize power loss while running both smoother and quieter.

Garden Tractors

G2160/G2460G/G2160-R48S

FEATURES

HYDRAULIC MOWER LIFTING WITH EASY HEIGHT ADJUSTMENT

In most cases, cutting height can be easily adjusted without leaving the operator's seat. Once the anti-scalp rollers are set, a wide variety of cutting heights can be dialed in without resetting the rollers.

HYDRAULIC MOWER LIFT

The mower deck can be hydraulically raised and lowered without leaving the seat, for more efficient operations.
